

PRIVATE ROUND · OTC

Invest in ANGT, ahead of the market.

A discounted, off-market allocation of the ANGT token — bought below the live market price, delivered into a 3-year vesting position that unlocks a little every day. Fully on-chain and verifiable.

up to 25%

OVERVIEW

What the Private Round is

It is an over-the-counter (OTC) allocation: you buy ANGT directly from the project treasury at a discount to the live market price — not on an exchange.

Your tokens are delivered into a vesting position and unlock gradually — daily, with no cliff — over 36 months. You claim the unlocked part any time.

Because you buy below market, you receive more ANGT for the same money and you are ahead from day one.

Below-market price

Up to 25% off the live price

More ANGT, same money

A larger allocation from day one

Break-even before full unlock

The rest is pure upside from your discount

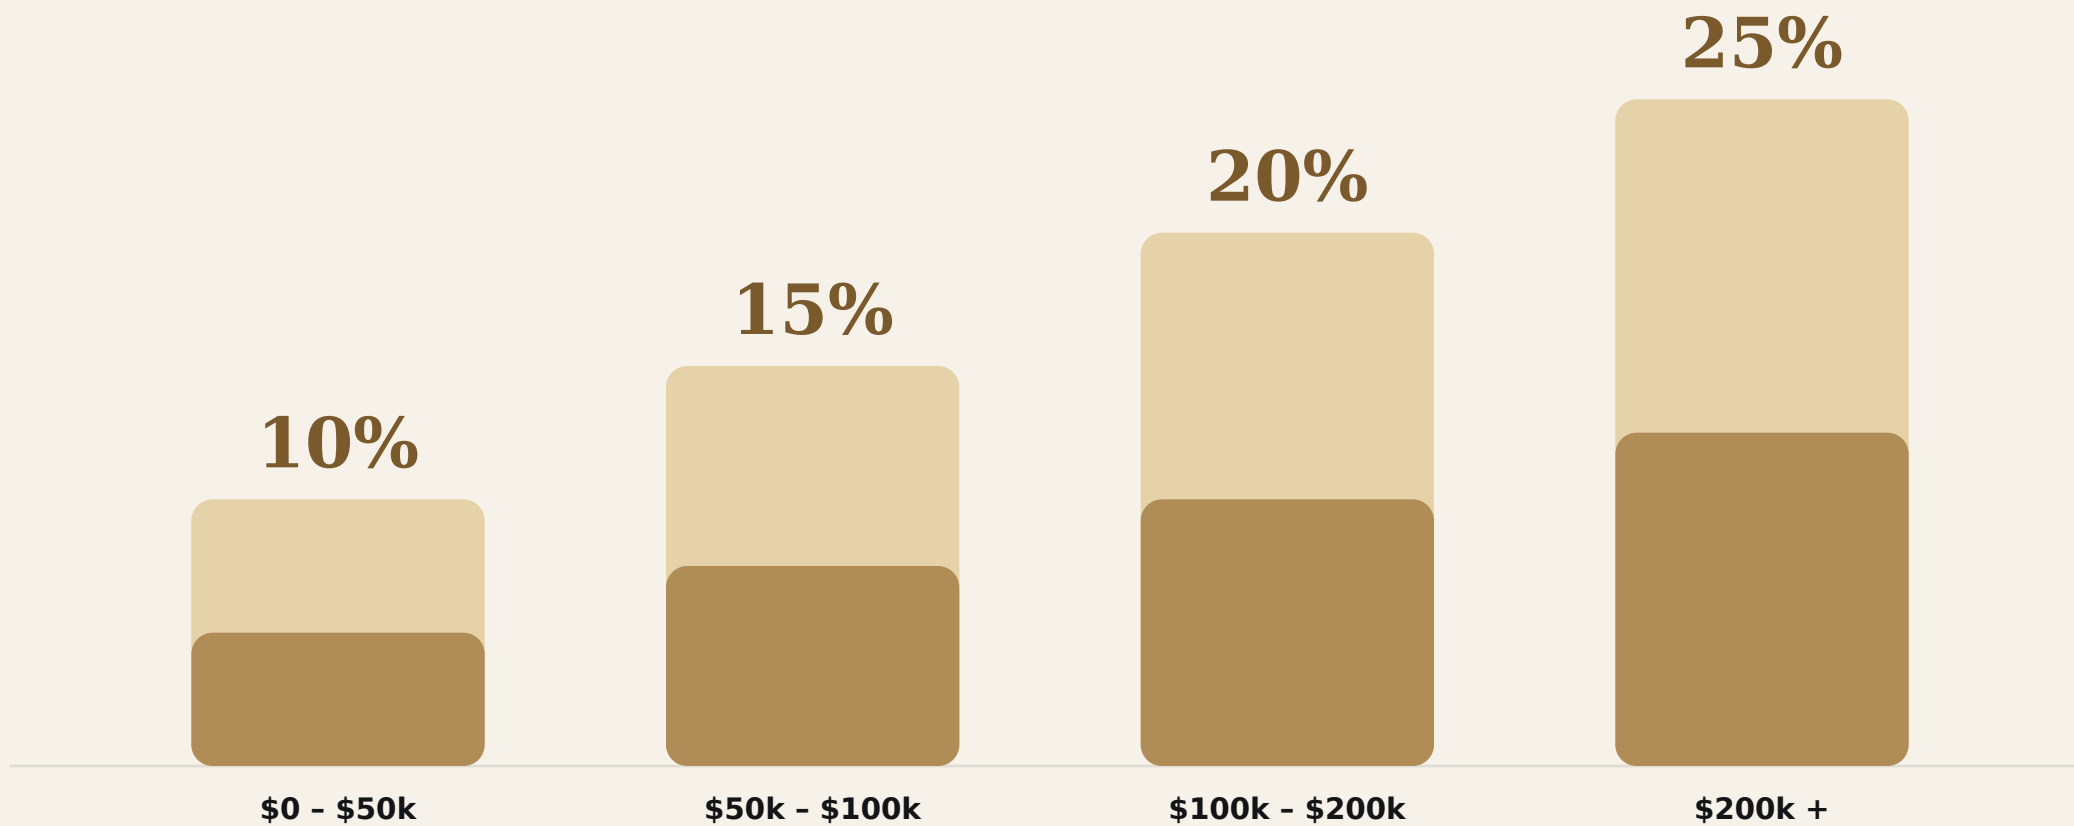

Daily unlock · 36 months

~2.78% released every month, no cliff

PRICING

Discount tiers

The bigger your ticket, the bigger the discount — applied automatically on-chain. Boundaries are inclusive.

Discount off the live market price · minimum ticket \$1,000 · schedule lives in a public contract

HOW IT IS CALCULATED

Your allocation, step by step

THE FORMULA (same as the smart contract)

$\text{effective price} = \text{market price} \times (1 - \text{discount})$

$\text{ANGT received} = \text{amount} \div \text{effective price}$

Price is read on-chain from the ANGT/USDT pool at purchase.

WORKED EXAMPLE · \$25,000 TICKET

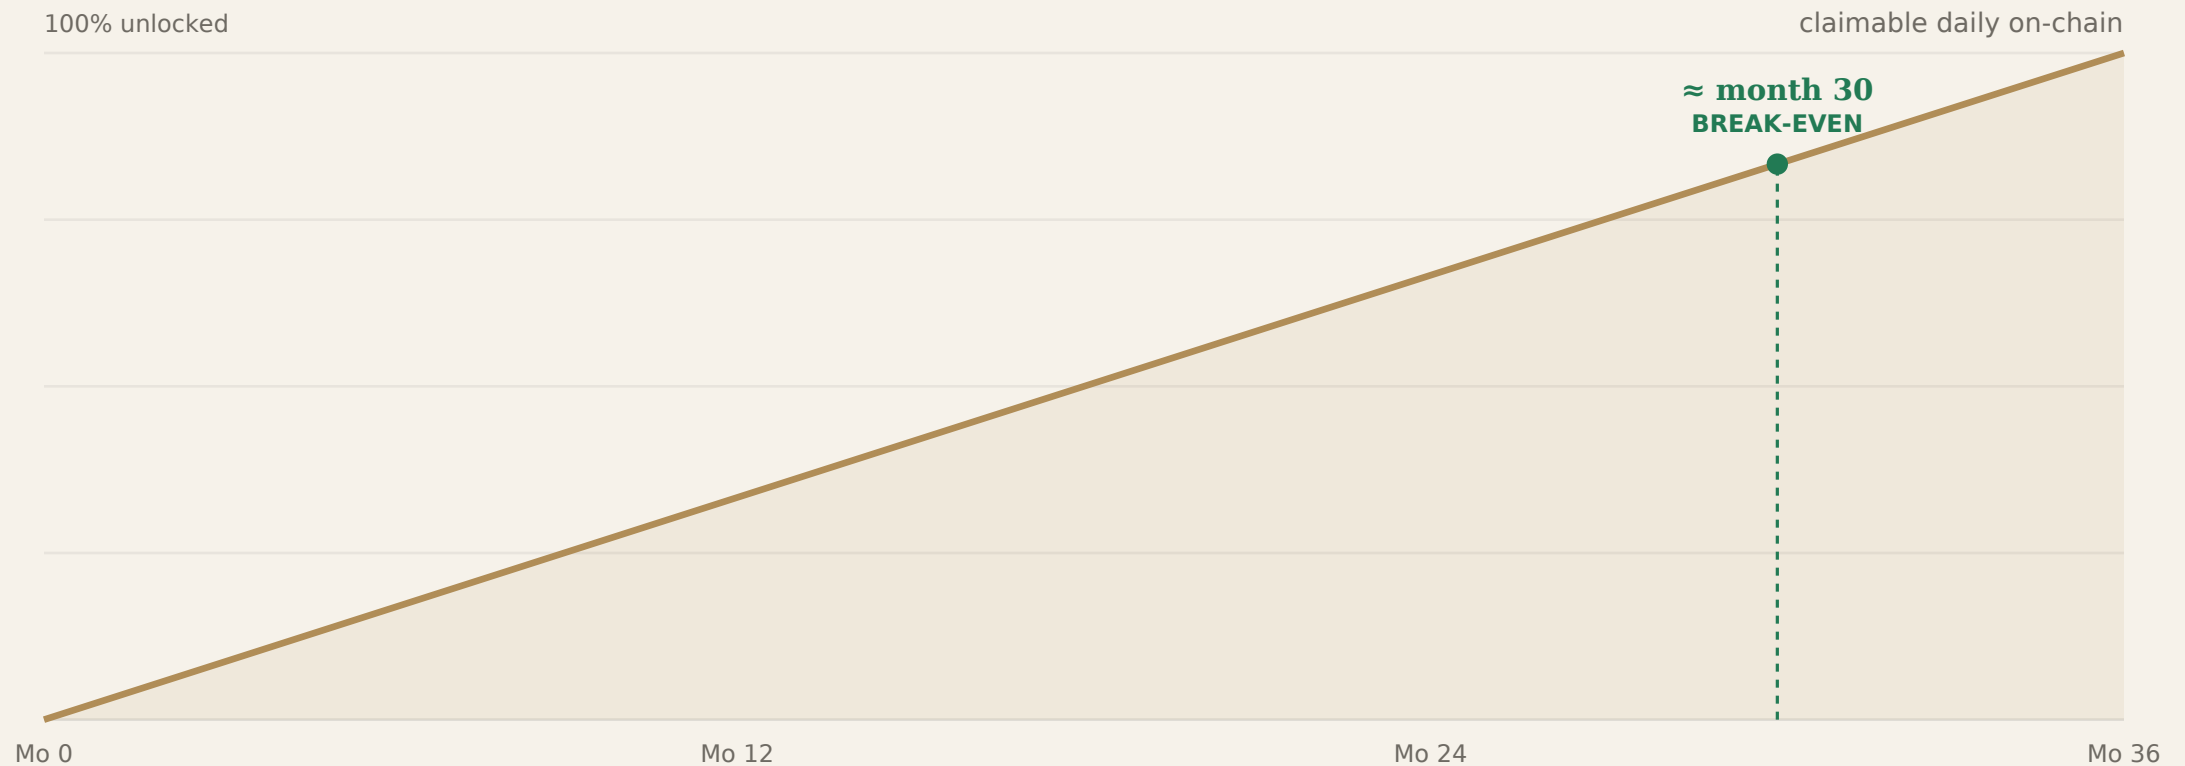

Market price	\$0.01400
Your discount (tier 1)	10%
Effective price	\$0.01260
ANGT received	≈ 1,984,127

That is 10% more ANGT than the same \$25,000 buys on the open market — before the token even moves.

VESTING

Gradual unlock over 1,080 days

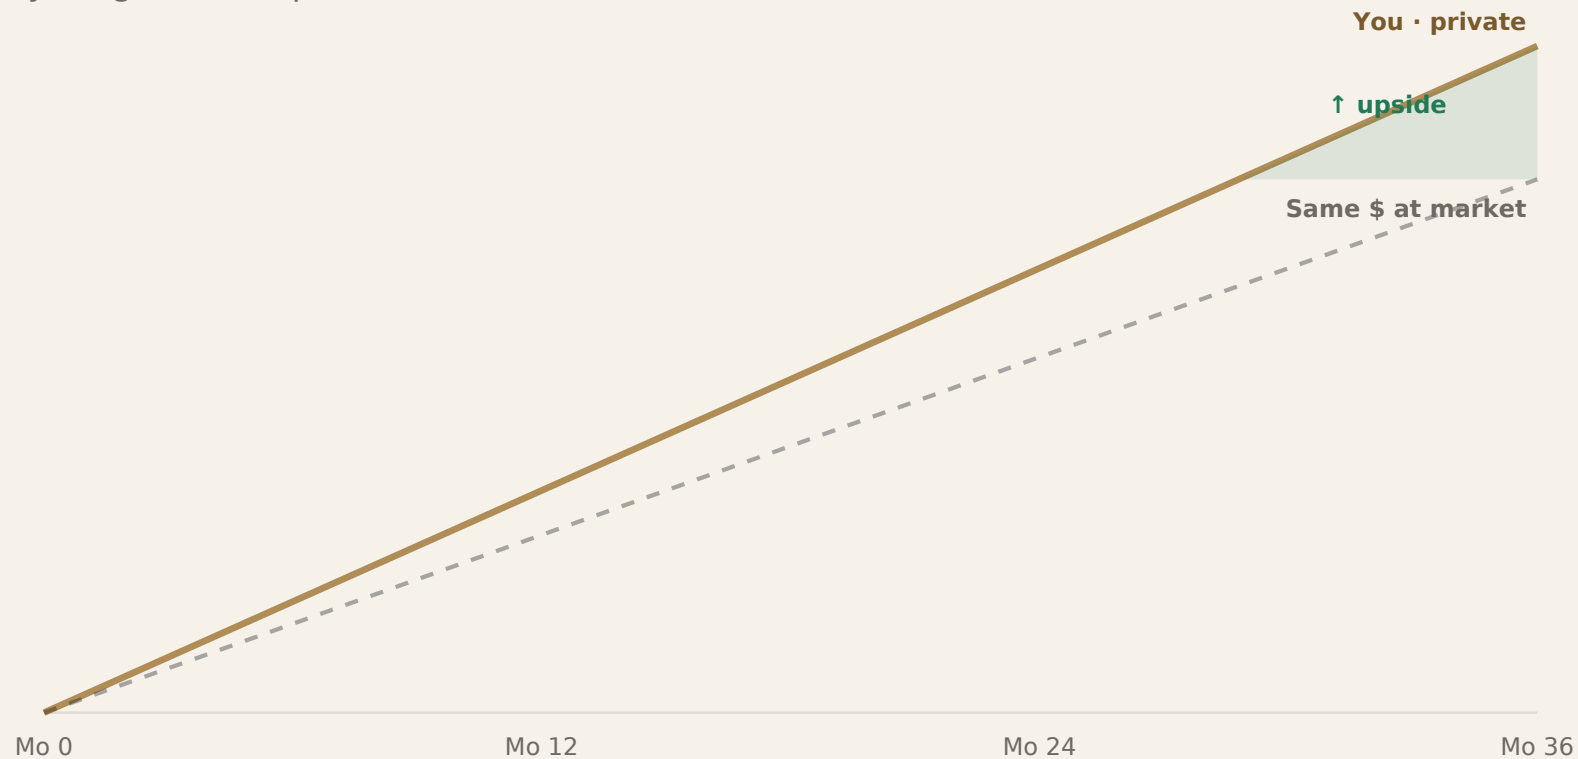

Every token you buy unlocks daily and linearly across 36 months — about 2.78% each month, with no cliff. You accrue from day one.

THE ADVANTAGE

More ANGT — and you earn it earlier

For the same money, the private round gives you more tokens than a market buy. As they unlock, the value you receive covers your cost before the schedule ends — everything after is upside.

EDGE VS MARKET

+18-33% ANGT

BREAK-EVEN

before 36 mo

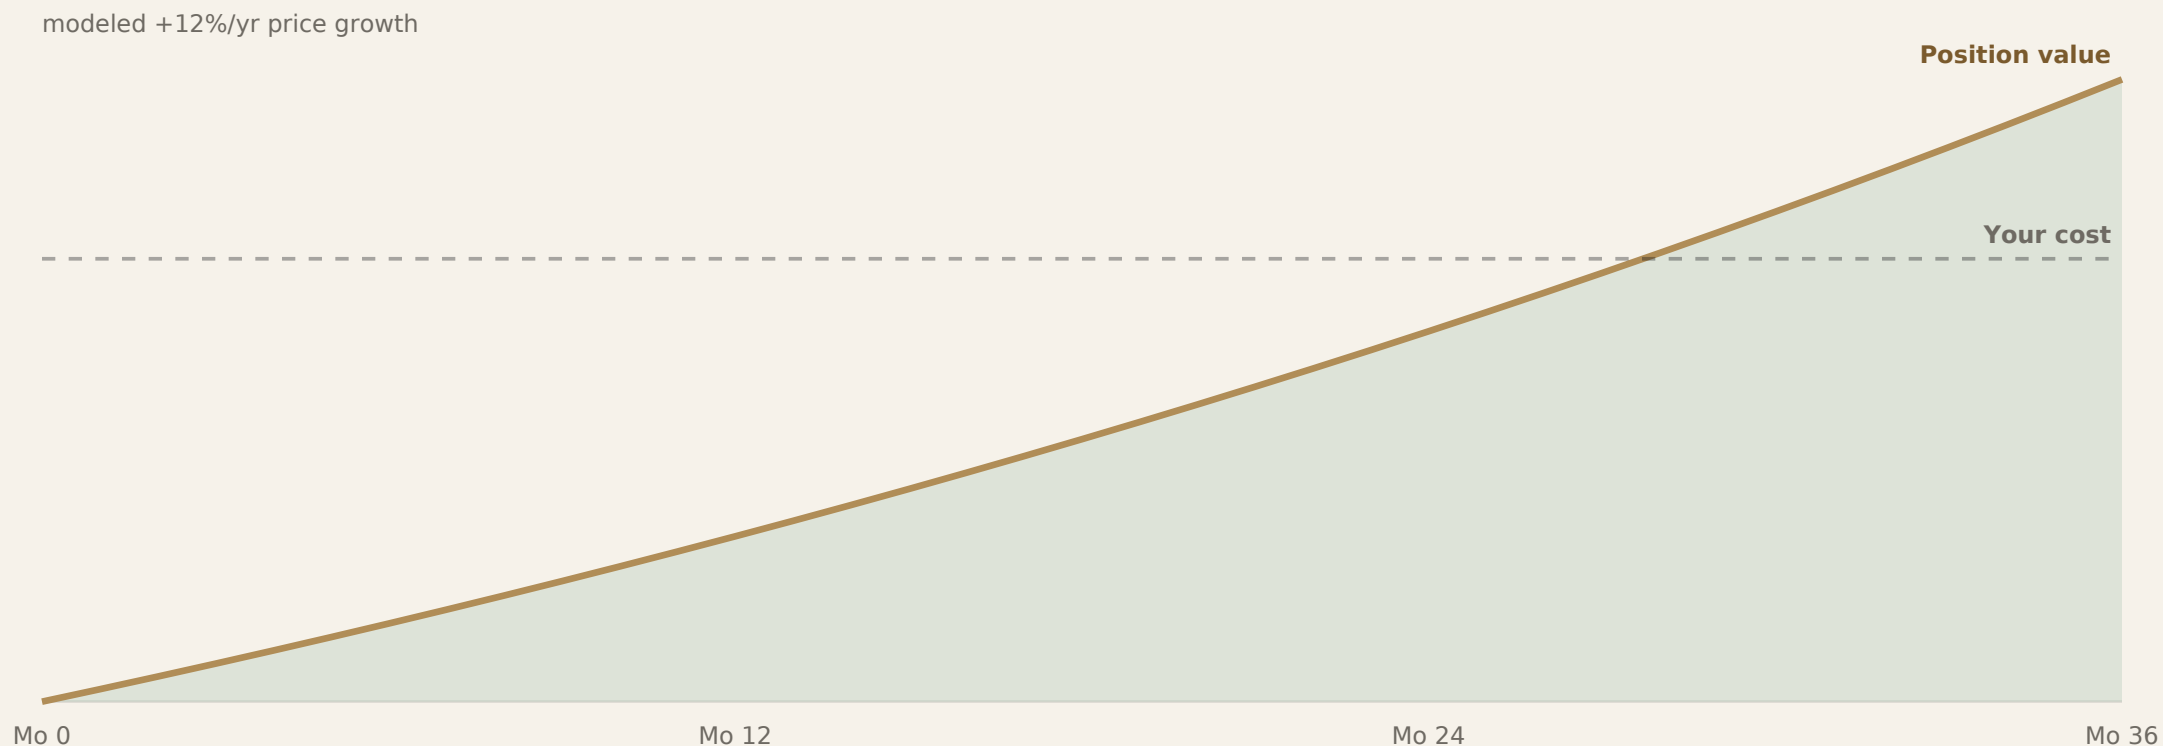

THEN

pure upside

ILLUSTRATION · NOT FINANCIAL ADVICE

If the price grows

A modeled scenario: as your tokens unlock and the price appreciates, position value rises above your cost. Illustration only — not a forecast or a promise.

TOKENOMICS

Fixed supply · clear allocation

500,000,000 ANGt total on Polygon — no additional mint. Half is treasury collateral, half is the market ecosystem.

TRUST

On-chain & verifiable

You do not have to trust a claim — read the code and the guarantees yourself.

Verified source

Sale contracts verified on Polygonscan (Exact Match)

Fixed supply

No additional mint — 500M ANGT hard cap

Safe multisig

Admin actions require multiple signatures

Immutable vesting

1,080-day duration is a fixed constant — cannot be shortened

Contracts (Polygon): OtcSale 0xE2dAc3...63Bc · OtcTerms 0xaF24eA...A0b3 · Vesting 0xaDb78D...9A73
